Table 1: Some low-level functions of the package OreModules

| DefineOreAlgebra | Set up an Ore algebra $D$ in OreMODULES |
| :--- | :--- |
| Involution | Apply an involution to a matrix over $D$ |
| Factorize(Rat) | Right-divide a matrix over $D$ by another one |
| Mult | Multiply two or more matrices over $D$ |
| ApplyMatrix | Apply (matrices of) operators in $D$ to (vectors <br> of) functions |
| KroneckerProduct | Compute the Kronecker product of two matrices |

Table 2: Main functions for the treatment module theory over Ore algebras $D$

| TorsionElements(Rat) | Compute the torsion left $D$-submodule of a <br> finitely presented left $D$-module |
| :--- | :--- |
| Exti(Rat) | Given a finitely presented left $D$-module $M$ and <br> a positive integer $i$, compute the left $D$-module <br> ext ${ }_{D}(M, D)_{\theta}$ |
| Extn(Rat) | Given a finitely presented left $D$-module $M$ and <br> a positive integer $m$, compute the left $D$-modules <br> ext ${ }_{D}^{i}(M, D)_{\theta}$, for $i=0, \ldots, m$ |
| Quotient(Rat) | Compute the quotient module of two left $D$ - <br> modules generated by the rows of two matrices |
| SyzygyModule(Rat) | Compute the first syzygy module of a finitely pre- <br> sented left $D$-module $M$ |
| Resolution(Rat) | Given a positive $i$ integer, compute the first $i^{\text {th }}$ <br> terms of a free resolution of a finitely presented <br> left $D$-module $M$ |
| FreeResolution(Rat) | Compute a free resolution of a finitely presented <br> left $D$-module $M$ |
| ShorterFreeResolution(Rat) | Compute a shorter free resolution of a finitely pre- <br> sented left $D$-module $M$ |
| ShortestFreeResolution(Rat) | Compute the shortest free resolution of a finitely <br> presented left $D$-module $M$ |
| OreRank(Rat) | Compute the rank of a finitely presented left $D$ - <br> module $M$ |
| ProjectiveDimension(Rat) | Compute the left projective dimension of a <br> finitely presented left $D$-module $M$ |
| HilbertSeries(Rat) | Compute the Hilbert series of a finitely presented <br> left $D$-module $M$ |
| HilbertPolynomial(Rat) | Compute the Hilbert polynomial of a finitely pre- <br> sented left $D$-module $M$ |
| Dimension(Rat) | Compute the index of the last non-zero Cartan <br> character of a finitely presented left $D$-module $M$ |
| Complement(Rat) | Compute the matrices $X \in D^{p \times q^{\prime}}$ and $Y \in D^{q^{\prime} \times p}$ <br> satisfying the equation $R^{\prime} X R^{\prime}-R^{\prime}=Y R$, where <br> the matrices $R \in D^{q \times p}$ and $R^{\prime} \in D^{q^{\prime} \times p}$ are given |
|  |  |

Table 3: Main functions for the treatment of linear systems over Ore algebras $D$

| Parametrization(Rat) | Find parametrization of the system |
| :--- | :--- |
| MinimalParametrization(s) (Rat) | Find minimal parametrization(s) of the system |
| AutonomousElements(Rat) | Find a generating set of autonomous elements of <br> the system (i.e., solve the system of equations for <br> the torsion elements) in case of PDEs |
| LeftInverse(Rat) | Compute a left-inverse for a matrix over $D$ <br> LocalLeftInverse <br> Given a $0 \neq \pi \in k\left[x_{1}, \ldots, x_{n}\right]$, compute a left <br> inverse for a matrix over $k\left[x_{1}, \ldots, x_{n}, \pi^{-1}\right]$ |
| RightInverse(Rat) | Compute a right-inverse for a matrix over $D$ |
| GeneralizedInverse(Rat) | Compute a generalized inverse matrix over $D$ <br> EliminationEliminate certain unknowns from a linear system <br> over $D$ |
| PiPolynomial | Given a system matrix over a commutative poly- <br> nomial ring $D$ and a variable $x_{i} \in D$, compute <br> the ideal of all $\pi$-polynomials in $x_{i}$ for the given <br> system |
| Connection | Compute the matrices defining a connection for <br> a given $D$-finite left $D$-module |
| FirstIntegral | In the case of ODEs, find first integrals of motion |
| LQEquations | Compute the Euler-Lagrange equations for a lin- <br> ear quadratic problem and a controllable OD sys- <br> tem |
