

## **Intergeo - Interoperable Interactive Geometry for Europe**

**Ulrich Kortenkamp**, Pädagogische Hochschule Schwäbisch Gmünd, Germany.

Working Group in the Frame of CADGME 2009

The Intergeo Project, started in October 2007, gathers mathematics educators, mathematicians, and software developers who share a common concern - the promotion of a widespread and sensible use of interactive geometry software in teaching. You can find more information about the project at <http://i2geo.net>. At CADGME we invite teachers and researchers to submit their work on educational resources using geometry software, as well as on quality assessment and classroom testing of such resources. The working group will also include introductions to the Intergeo platform i2geo.net and the quality testing framework that was developed by the consortium.
