

Beyond DGS - Simulations and Scripting with Cinderella

Ulrich Kortenkamp, Pädagogische Hochschule Schwäbisch Gmünd, Germany,
Andreas Fest, Technische Universität Berlin, Germany

In this workshop we will explore the new facilities of the Interactive Geometry Software Cinderella.2 and work with physics simulations and custom scripts. For a sampler of what is possible see <http://www.mathe-vital.de>
A basic knowledge of any geometry software is required. Participants will receive a temporary license for the software and can use their own laptops or the lab facilities at the conference.
